Preface xiii
Contents xiv

Chapter 1. Fractals

Self-organization of magnetic domain patterns
P. Bak and H. Flyvbjerg 3

Self-organization and anomalous diffusion
P. Bántay and I.M. Jánosi 11

Multifractality in a shell model for 3D turbulence
L. Biferale, M.H. Jensen, G. Paladin and A. Vulpiani 19

Multifractal analysis, a method to investigate the morphology of materials
S. Blacher, F. Brouers and G. Ananthakrishna 28

How a random walk covers a finite lattice
M.J.A.M. Brummelhuis and H.J. Hilhorst 35

The fractal nature of the universe
P.H. Coleman and L. Pietronero 45

Fast algorithm for computing the fractal dimension of binary images
R. Creutzburg, A. Mathias and E. Ivanov 56

Experimental study of polarization-selective holes, burning in absorption spectra of metal fractal clusters
Yu.E. Danilova, A.I. Plekhanov and V.P. Safonov 61

Fixed scale transformation approach to critical fluctuations and fractal growth
A. Erzan 66

Self-similarity of harmonic measure on DLA
C.J.G. Evertsz and B.B. Mandelbrot 77

Fractional diffusion equation for transport phenomena in random media
M. Giona and H.E. Roman 87

Chapter 1. Fractals

Self-organization of magnetic domain patterns
P. Bak and H. Flyvbjerg 3

Self-organization and anomalous diffusion
P. Bántay and I.M. Jánosi 11

Multifractality in a shell model for 3D turbulence
L. Biferale, M.H. Jensen, G. Paladin and A. Vulpiani 19

Multifractal analysis, a method to investigate the morphology of materials
S. Blacher, F. Brouers and G. Ananthakrishna 28

How a random walk covers a finite lattice
M.J.A.M. Brummelhuis and H.J. Hilhorst 35

The fractal nature of the universe
P.H. Coleman and L. Pietronero 45

Fast algorithm for computing the fractal dimension of binary images
R. Creutzburg, A. Mathias and E. Ivanov 56

Experimental study of polarization-selective holes, burning in absorption spectra of metal fractal clusters
Yu.E. Danilova, A.I. Plekhanov and V.P. Safonov 61

Fixed scale transformation approach to critical fluctuations and fractal growth
A. Erzan 66

Self-similarity of harmonic measure on DLA
C.J.G. Evertsz and B.B. Mandelbrot 77

Fractional diffusion equation for transport phenomena in random media
M. Giona and H.E. Roman 87

Statistical mechanics of heteropolymer folding
G. Iori, E. Marinari, G. Parisi and M.V. Struglia 98

Experimental achievement of 2D percolation and cluster–cluster aggregation models by cluster deposition
P. Jensen, P. Melinon, A. Hoareau, J.X. Hu, B. Cabaud, M. Treilleux, E. Bernstein and D. Guillot 104

The orthonormal wavelet representation of complex structures
W. Korneta 111

The nonlinear evolution of spatio-temporal structures in microemulsions
W. Korneta, M.A. Lopez-Quintela and A. Fernandez-Novoa 116

Generalized scale invariance and differential rotation in cloud radiances
S. Lovejoy, D. Schertzer and K. Pflug 121

Equivalence between the Abelian sandpile model and the $q \to 0$ limit of the Potts model
S.N. Majumdar and D. Dhar 129

Growth pattern formation in Bénard flows
G. Marshall and E. Arguijo 146

Low temperature stability of nonperiodic structures
J. Miękisz 151

The spiralling self-avoiding walk and chaotic correlations
M. Nifle 154

Monte Carlo study of 3D vesicles
E. Orlandini and M.C. Tesi 160

Properties of localized vibrational modes on fractal structures
A. Petri 166

Multiscaling transformation in dynamical systems and turbulence
G. Paladin, M. Vergassola and A. Vulpiani 174

Resonant excitations and nonlinear optics of fractals
V.M. Shalaev, M.I. Stockman and R. Botet 181

Hard and soft multifractal processes
D. Schertzer and S. Lovejoy 187

Closed formulae for Green functions on fractal lattices
W.A. Schwalm and M.K. Schwalm 195

Fixed scale transformation applied to cluster–cluster aggregation in two and three dimensions
S. Sidoretti and A. Vespignani 202

Self-avoiding surfaces and vesicles on a lattice
A. Stella 211

Pores and Hausdorff dimension in fractal site-percolation systems
E.P. Stoll and M. Kolb 222

Fluids in fractal porous media: scaling of transport properties
P.G. Toledo, H.T. Davis and L.E. Scriven 228

Fractal dimensions of Potts clusters
C. Vanderzande 235

One-dimensional models of growing and coalescing droplets
I. Yekutieli, C. Godrèche and B. Derrida 240

Chapter 2. Spin Glasses

Study of the asymmetric Little model
R. Brunetti, G. Parisi and F. Ritort 247

A class of long range Ising spin models described by Curie–Weiss mean field theory
A. Canning 254

Replica symmetry breaking and Monte Carlo simulations for spin glasses
S. Caracciolo 261

Multifractality of Ising models on hierarchical lattices: pure and spin glass cases
S. Coutinho, O.D. Neto, J.R.L. de Almeida, E.M.F. Curado and W.A.M. Morgado 271

Spin-glass dynamics. Relation between theory and experiment: a beginning
J. Hammann, M. Lederman, M. Ocio, R. Orbach and E. Vincent 278

Short range corrections to the order parameter and to the excitation spectrum of the Ising spin glass
I. Kondor, C. De Dominicis and T. Temesvári 295

The REM zeros in the complex temperature and magnetic field planes
C. Moukarzel and N. Parga 305

Some recent developments in the theory of replica symmetry breaking
G. Parisi 316

Proton and deuteron glasses
R. Pirc, B. Tadić and R. Blinc 322

Replica approach to the quantum infinite-ranged XY spin glass
K. Walasek and K. Lukierska-Walasek 331

Numerical study of the TAP equations for infinite-range spin glass models
T. Yokota 336

Chapter 3. Neural Networks

Simple diagrammatic rules for solving dendritic cable problems
L.F. Abbott 343

Optimal storage capacity for diluted multi-state neural networks: continuous and discrete couplings
D. Bollé, P. Dupont and J. van Mourik 357

On the phase diagram of the Q-state Potts-glass neural network
D. Bollé, P. Dupont and J. Huyghebaert 363

Geometrical interpretation of the back-propagation algorithm for the perceptron
M. Budinich and E. Milotti 369

Neural networks with dynamical thresholds
C. Campbell and K.Y.M. Wong 378

Replica-symmetry breaking in neural networks
V.S. Dotsenko and B. Tirozzi 385

A neural network dynamics that resembles protein evolution
E.A. Ferrán and P. Ferrara 395

Learning in feed-forward neural networks by improving the performance
M.B. Gordon, P. Pereto and M. Rodriguez-Girones 402

Biased learning in Boolean perceptrons
O. Kinouchi and N. Caticha 411

Exact learning and default-rule governed behaviour
A.F. Kohan and R.P.J. Perazzo 417

A model for a multi-class classification machine
A. Rau and J.-P. Nadal 428

Spatio-temporal dynamics of human EEG
M. Paluš, I. Dvořák and I. David 433

Topological maps on Ising spin networks
G.A. van Velzen 439

Selecting examples for an optimal perceptron
T.L.H. Watkin and A. Rau 444

Sequences of memories in Boolean networks
T.L.H. Watkin and D. Sherrington 449

Statistical mechanics of neural networks: what are the differences between wide and narrow basins?
K.Y.M. Wong and D. Sherrington 453

Novel phase diagrams of sequential learning in neural networks
K.Y.M. Wong, P.E. Kahn and D. Sherrington 461

Adaptive optimization in neural networks
K.Y.M. Wong and D. Sherrington 466

Basins of attraction in a neural network model trained with external fields
H.W. Yau and D.J. Wallace 471

List of contributors 481
